Scour predictions were made for land cover conditions as shown in the 2009 High Resolution Land Cover database and soil conditions as shown in the 2013 USDA NRCS gSSURGO database.

Scour predictions were not made behind levees that appear to protect against the 1% annual flood.

For more information on levee accreditation, please visit www.fema.gov.

Some sections of stream are missing depth/inundation maps; this had to be done in areas that incorporated detailed studies or digital conversions as part of the Iowa Floodplain Mapping project.
